

Goal

kaggle.com provides monthly exports of Hubway bike sharing trip records:

- https://www.bluebikes.com/
- Latest Full Dumps: https://www.kaggle.com/acmeyer/hubway-data

Goal

We want to make use of this data to calculate some Usage KPIs.

Workflow:

- Gather data from https://www.kaggle.com/acmeyer/hubway-data
- Save raw data (CSV files) to HDFS (partitioned by YYYYMM)
- Optimize, reduce and clean raw data and save it to final directory on HDFS
- Calculate KPIs and Export them to an Excel File
- The whole data workflow must be implemented within an ETL workflow tool (e.g. Pentaho Data Integration or Airflow) and run automatically

Dataflow: 1. Get Hubway Bike Sharing Data

Dataflow: 2. Raw To Final Transfer

/user/hadoop/hubway/**raw/201606**/*.csv /user/hadoop/hubway/**raw/201607**/*.csv /user/hadoop/hubway/**raw/201608**/*.csv

- move data from raw to final directory
- optimize and reduce data structure for later query purposes if necessary
- remove duplicates if necessary
- ...

/user/hadoop/hubway/final/201606/* /user/hadoop/hubway/final/201607/* /user/hadoop/hubway/final/201608/*

. . .

Dataflow: 3. Calculate And Export KPIs

/user/hadoop/hubway/final/201606/*
/user/hadoop/hubway/final/201607/*
/user/hadoop/hubway/final/201608/*

٠.

- calculate KPIs and export them to Excel
- use Hive, Spark or PySpark

Dataflow: 4. KPIs To Calculate

Calculate per Month:

- Average Trip Duration (in minutes)
- Average Trip Distance (in km)
- Usage Share by gender (in percent)
- Usage Share by age (in percent)
- Top 10 most used bikes
- Top 10 most start stations
- Top 10 most end stations
- Usage share per timeslot (in percent):
 - 00:00-06:00
 - 06:00-12:00
 - 12:00-18:00
 - 18:00-24:00
