Use OpenAdresses Data To Validate Adresses

## Practical Exam

Goal

OpenAddresses.io provides regulary exports of worldwide adresses (we will focus on europe for now):

- http://results.openaddresses.io/
- https://s3.amazonaws.com/data.openaddresses.io/openaddr-collected-europe.zip

```

Goal

We want to make use of this data to validate adresses entered on a website, to check whether they are real or not.
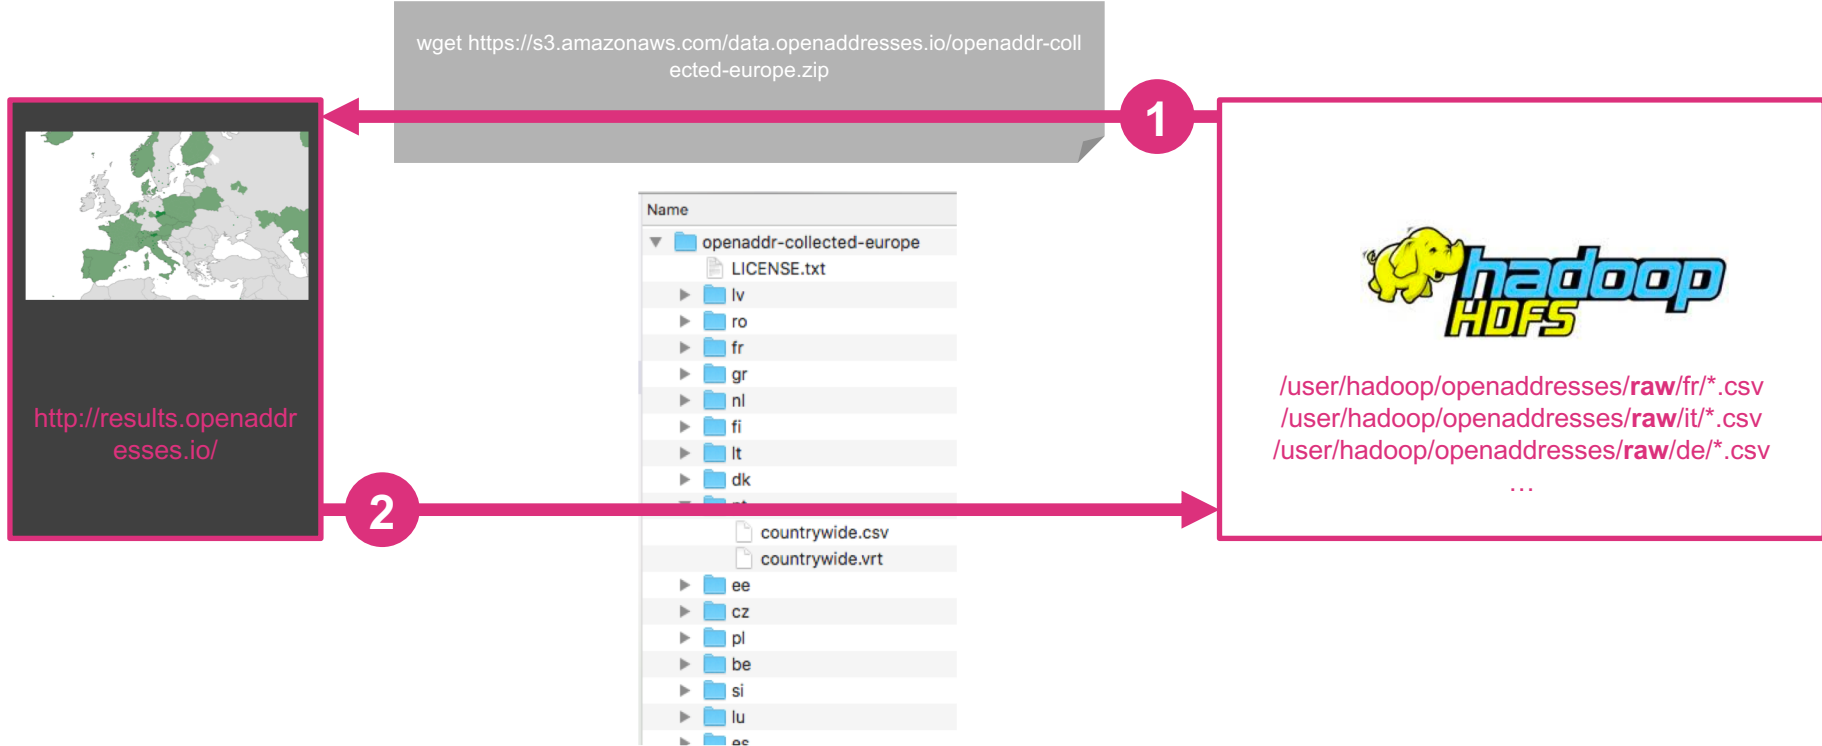

Workflow:

- **Gather data** from OpenAddresses.io
- **Save** raw data (*CSV files*) to HDFS (partitioned by country
- shortcut, e.g. *de*, *fr*, *it*…)
- **Optimize**, **reduce** and **clean raw data** and save it to **final** directory on HDFS
- **Export** address data **to end-user database** (e.g. MySQL, MongoDB…)
- Provide a simple **HTML Frontend** which is able to:
    - read from end-user database
    - process user input (Street, City, Postcode…)
    - validate user input against OpenAddress data in end-user database
    - Display result (real or non real address)
- The whole data workflow **must be implemented** within an ETL **workflow tool** (e.g. Pentaho Data Integration or Airflow) and **run automatically**

Street:

Potsdamer Chaussee

Street No:

9

City:

Berlin

Postcode:

13593

Check Address!

www.marcel-mittelstaedt.com

Dataflow: 1. Get Address Data

wget https://s3.amazonaws.com/data.openaddresses.io/openaddr-collected-europe.zip

http://results.openaddresses.io/

1

2

Name
- openaddr-collected-europe
  - LICENSE.txt
  - lv
  - ro
  - fr
  - gr
  - nl
  - fi
  - lt
  - dk
  - ...
    - countrywide.csv
    - countrywide.vrt
  - ee
  - cz
  - pl
  - be
  - si
  - lu
  - es

/user/hadoop/openaddresses/**raw**/fr/*.csv
/user/hadoop/openaddresses/**raw**/it/*.csv
/user/hadoop/openaddresses/**raw**/de/*.csv
…

Dataflow: **2. Raw To Final Transfer**

/user/hadoop/openaddresses/**raw**/fr/*.csv
/user/hadoop/openaddresses/**raw**/it/*.csv
/user/hadoop/openaddresses/**raw**/de/*.csv

…

1

/user/hadoop/openaddresses/**final**/fr/*
/user/hadoop/openaddresses/**final**/it/*
/user/hadoop/openaddresses/**final**/de/*

…

- move data from *raw* to *final* directory
- optimize and reduce data structure for later query purposes if necessary
- remove duplicates if necessary
- …

www.marcel-mittelstaedt.com

Dataflow: **3. Enhance Data And Save Results**

/user/hadoop/openaddresses/**final**/fr/*
/user/hadoop/openaddresses/**final**/it/*
/user/hadoop/openaddresses/**final**/de/*
...

- enhance data (e.g. add missing entries of street no's)
- use *Hive*, *Python*, *Spark* or *PySpark*
- save everything to a end-user database (e.g. *MySQL*, *MongoDB*)

www.marcel-mittelstaedt.com

Dataflow: 4. Provide Simple Web Interface

Street:

Potsdamer Chaussee
